

Ivaylo Vasiliev

Quality Assurance Automation Engineer

As a QA Automation Engineer with almost 3 years of experience in testing software, I am motivated to ensure that products meet quality standards. Proficient in Java, C#, Selenium and many tools I create and execute tests efficiently and integrate them with CI/CD pipelines. Passionate about collaboration and continuous learning. I believe that my skills, experience, and motivation make me a valuable asset to any software development team.

English
Full Professional Proficiency

WORK EXPERIENCE

Quality assurance automation engineer

Codix Bulgaria

11/2021 - Present

Achievements/Tasks

▪ I play a pivotal role in ensuring the quality and reliability of our financial software products. I actively participate in the entire software development lifecycle, collaborating closely with cross-functional teams to understand project requirements, design test plans, execute test cases, and analyze results. Utilizing my expertise in Java programming, I develop robust automation scripts using Cucumber and Selenium to streamline testing processes, resulting in significant time and cost savings for the company. One of my key accomplishments is spearheading the implementation of comprehensive test strategies for Factoring, Banking, and Debt Collection software modules. By conducting rigorous functional, integration, and regression testing, I consistently identify and resolve critical issues before product release, enhancing overall product quality and customer satisfaction. Additionally, I contribute to the continuous improvement of our QA processes by introducing innovative testing methodologies and tools, leading to more efficient workflows and higher productivity.

CERTIFICATES

QA Automation (11/2019)

Software University

Fundamentals of programming with C# (07/2019)

Software University

International Legal English Certificate (05/2009)

University of Cambridge
